Hiring Committee

Google
Irvine, CA

To Hiring Manager,

I am writing to apply for the Security Engineer Intern position at Google. As a Cybersecurity student at Northern Arizona University (B.S., expected Summer 2026) and recent completion of the Google Cybersecurity Professional Certificate, I am eager to contribute to Google's mission of securing systems at global scale. The opportunity to work with Google's engineering teams on security, intrusion detection, and vulnerability testing aligns directly with both my academic training and hands-on technical experience.

In my studies and projects, I have gained practical experience coding in Python, C++, JavaScript, as well as working in Linux environments. I have applied this knowledge in areas such as SQL based data management, web administration, and security strengthening. Through coursework and the Google certificate program, I built skills in threat detection, risk analysis, SIEM tools, applying CIA triad, and incident response. I am especially drawn to Google's approach of building automated tools and scripts to achieve security at scale. I am eager to bring my technical problem-solving mindset and collaborative approach to your team.

I would be honored by the opportunity to contribute to Google's efforts in protecting highly sensitive data while gaining deeper experience in offensive security testing and secure software development. I can be reached at tylervandermooren@gmail.com, and I look forward to discussing how my skills and passion align with this internship.

Sincerely,
Tyler Vander Mooren
