

Literature Review

In the process of developing your professional career, you will become an “expert” on some topic. But people don’t become experts overnight! It takes research and work. For this assignment, you should apply the techniques you’ve learned in class to find reliable sources on a topic that is interesting to you (CS or EE) and write a literature review. Please check with your instructor for a quick approval of your topic.

You will need to read about 10 sources to get an idea of what is involved in your topic. These could be conference papers, journal papers, or industry whitepapers. Then narrow down your sources to five that you will summarize for your paper. Each of these five summaries should be about ½ page. The introduction to your literature review should give a brief overview of your chosen topic.

Your literature review will also include a graphic. This could be a table, mind map, taxonomy, Venn diagram, timeline, infographic, or other graphic to help describe the relationships among the five sources you have chosen. The idea is to help the reader see how your five sources are related to each other, help you dive deeper into relationships among sources, and provide some practice in communicated technical information clearly with a graphic. The graphic must be produced by software, not hand-drawn, to be suitably professional.

Your literature review should meet the following formatting guidelines:

- Approximately four pages plus bibliography of your five sources
 - About ½ page introduction, five ½ page summaries, plus the graphic
 - Start bibliography on a new page
- MS Word document
- Font: Times New Roman, 12 point
- A centered header with the title, your name, class, and date single spaced (1.15) only on the first page
- Double spaced text = 2.0 line spacing in Word
- Indentation of new paragraphs
- “Normal” margins in Word, 1 inch
- A bibliography of your five sources in either ACM or IEEE format depending on your major

Post your document to the “Literature Review” assignment link. Do not post PDF documents, post only MS Word documents.

Grading: You will get all the points if you follow the instructions. Be sure to contact your instructor early with your questions so I can help you before the deadline.
