**Subject:** Video short assignment

One of the skills necessary for a successful career is making a presentation. In this assignment you will organize the information from your Tech Essay writing assignment to make an individual presentation that is recorded on video.

The Tech Essay was your summary of a problem in a technical area and a proposed solution. You must summarize that information to a different format for this presentation. Consider that much of your knowledge and content must be condensed or removed to fit the format of a short presentation. This means a very short introduction and conclusion with the inclusion of substantial content.

The video that you record will be narrating three PowerPoint slides and must be two minutes long. The three slides will have specific content:

- Slide 1: Title, your name, date, a recent professional picture of you (face included, usually head and shoulders)
- Slide 2: The problem
- Slide 3: The proposed solution

There is great reference material in your textbook, PSTC Chapter 15 on giving a presentation. As noted there, an effective slide presents a clear, well-supported claim, is easy to see, easy to read, simple, and correct. Graphics are allowable, but should be used sparingly since you have only three slides!

It will take some rehearsing to get your recording looking and sounding professional, don't expect a perfect product on the first try! Some feedback from a friend on your recording can vastly improve your grade. Since you have just your voice, it is easy to have a script that you read from and record along with your slides. With just a two minute limit, you should certainly avoid long pauses.

**Deliverable:** An MP4 file that is two minutes long with your narration. Upload to the discussion board at "Video Short". Create a thread, put the title of your presentation in the subject line, and attach the MP4 file, then submit.
